

On site MRI at Rowe Referrals now online.

We have been offering an elective MRI scanning service for almost 15 years gaining a wealth of experience in advanced imaging. With the variety and number of cases increasing in recent years the need for in-house access to advanced diagnostics has become critical to providing the top level of care to our patients and those referred to us. Our 1.5T Phillips scanner allows us to achieve incredibly detailed images for our own patients and those referred to us 24 hrs a day, 7 days a week. Our scans are performed by Ian Jennings, an RCVS advanced practitioner in Veterinary Diagnostic Imaging, who has a decade of experience with MRI and its interpretation. Referrals can be seen for either imaging & reporting only, allowing you to manage your own cases, or via our other departments. If you have any cases that would benefit from MR imaging or need any advice please contact us.
